

What is it about?

ANITA assesses how well your company can evidence its due diligence obligations in the supply chain: based on your information and your own documents, oriented to the German Supply Chain Due Diligence Act (LkSG) and EU Directive (EU) 2024/1760 (CSDDD), with a justification for each point. For: companies obliged to comply, suppliers that have to evidence their customers' requirements, consultants and audit organisations. 7 topic areas, 30 criteria, overall grade 1–5 (letter A–F), 9 steps.

Six steps to your rating

- 1 Open and register.** Open anita.datarata.eu. At the top right choose the language (Deutsch, English, Français). Want a look first? "Try the demo" works without signing up. To start: Register, company name, email, password, confirm the privacy notice (if required: access code from DataRata and confirmation via the link in the email). You automatically become Owner of your company.
- 2 Company profile (step 1 of 9).** Industry, size, which LkSG and CSDDD thresholds you reach (LkSG from 1,000 employees in Germany; CSDDD from more than 5,000 employees and EUR 1.5 billion turnover) and whether you are a client, a supplier or both. ANITA classifies you on that basis without obligation; suppliers see the criteria customers typically ask for.
- 3 Assess the topic areas (steps 2 to 8).** Each topic area is a page with a table of criteria. For each criterion: upload documents, ANITA checks the relevant excerpt and proposes a score with a justification. You can change the score at any time with the slider, even without a document (scale 0–5). If a point does not concern you: "not applicable", it then does not count.
- 4 Result (step 9 of 9).** Overall score with letter (A very good to F insufficient), heatmap (green, yellow, red), biggest problem areas and the regulatory classification with legal status. "Download report (PDF)" gives the report with fields of action; the raw data is available as JSON.
- 5 Check a single document.** Menu, Document review: have one document checked (e.g. your supplier code of conduct or your policy statement) without starting a whole rating.
- 6 Repeat.** You can repeat a rating at any time to show progress. Downloading the same report again costs nothing; a rating only counts when the assessment changes. How many complete ratings are included depends on the edition (Demo, Review, Start, Pro, Enterprise/On-Premise).

Finding your way around

- Menu (top right) opens the navigation: Dashboard, Start, Company profile, Assessment (the topic areas), Result, Document review, "How ANITA works" (short explanation), Help & FAQ, Accounts, Settings, Logout.
- Home leads back to the start page; the dashboard shows licence & team, assessment status, security-relevant events and help at a glance.
- Topic areas: Governance, responsibility & policy statement; Risk analysis & prioritisation; Prevention & supplier management; Remediation & termination; Complaints procedure & stakeholder engagement; Indirect suppliers & value chain; Effectiveness, documentation & reporting.
- At the top of every page: language (DE/EN/FR) and accessibility (high contrast, font size A to A+++, reduce animations).

Legal status

- Each criterion names the LkSG section and, where there is a counterpart, the CSDDD article. The CSDDD only applies once transposed into German law (deadline 26 July 2028, application from 26 July 2029); the LkSG is currently being amended. The assessment grid carries a version number and the legal status; earlier ratings stay linked to that status.

Settings and accounts (menu)

- Settings: change password, two-factor sign-in (2FA) with an authenticator app, Team (invite people by email; roles Owner, Deputy, User; invitation valid 7 days), Appearance (name, accent colour, logo), Licence, Quick guide (this guide as PDF), Data & privacy (export everything or delete analysis data), delete company.
- Accounts (Pro): manage several businesses or clients. Create account, Open, assess there, "Back to main account". Each account has its own quota.

Working with HORUS and the other products

HORUS combines the ratings of all DataRata products into one overall score. Each product has its own sign-in. To connect ANITA with HORUS:

- Create a token: in ANITA Menu, Settings, Connection to HORUS, Create access token (Owner and Deputy only). It is shown only once: copy it, then "I have saved the token".
- Paste it into HORUS: on horus.datarata.eu click Connect for the product and paste the token.
- What HORUS receives: overall value, coverage and values per category of your latest report, never documents, texts or names. The token is read-only, expires (2 years at most) and can be revoked at any time.

Good to know

- Uploaded files are used only for the evaluation and are not stored permanently; the result and the quoted text excerpts remain in the account. The automatic evaluation uses an AI language model (provider Anthropic, see the privacy notice); you see every justification and can change every value.
